Koho Zheng

AI Product & Engineering

Shanghai · kohozheng@outlook.com · https://kohozheng.com · https://github.com/kohoj

At flowith, I help design and build AI products for creative work and agent collaboration, and I also build my own. Following how models and agents evolve, I explore new ways to live and work with intelligence, from product judgment and interaction design to engineering.

INDEPENDENT PRODUCTS

Aha Labs — Independent Product Design & Engineering · https://ahalabs.site — 2026 - Present

Galta · An AI canvas connecting references and creation · https://galta.art — Sep 2026 - Present

Built around judging and revising creative work. One canvas connects saved web pages, references and creation, letting words and direct editing share the same context; supports images, films, interactive pages and version history. Independently handle product, interaction design, the browser extension and Mac app. Product site live; early access applications open.

Mochi · A collaborative agent with shared team context · https://mochi.host — Aug 2026 - Present

Brought an agent into teams' existing Feishu groups to cut down on re-explaining project background and carry discussions through to the work, so nontechnical teammates can help move projects forward too. Connect repository sources, answers, confirmed tasks and follow-up. Independently handle product, interaction design, the agent and Mac app, including setup and authorization. In beta; applications open.

EXPERIENCE

flowith — Founding Developer · Senior Software Engineer — Nov 2022 - Present

Agent.Space · A shared workspace for people and agents · https://agent.space — Jul 2026 - Present

Contribute to product design and full-stack development. With the team, separate persistent conversations, files and progress from temporary execution, so teammates can pick up work, agents can run in parallel and results can be delivered. Contributions span shared sessions, agent protocols, cloud and local access, preview and publishing, models, billing and permissions.

Matrix · Multi-agent collaboration · https://matrix.build — Mar - Jul 2026

Helped build the agent harness, inference runtime, cloud services and HQ macOS client from inception. Improved startup, connection states and observability for clearer execution and diagnosis.

flowith · An AI creation canvas · https://flowith.io — Jul 2023 - Mar 2026

Led early architecture and contributed to the first release, front and back end, and interface design. Built Oracle's planning and tool use from scratch in 2024; it later became Agent Neo. Open-sourced canvas-cowork for agents to work directly on the canvas.

Mirro AI · AI for keeping in touch with acquaintances — Mar - Jul 2023

Built the front end from scratch for contact memory and assisted conversations. The team presented the product at MiraclePlus's spring demo day in June 2023.

Bento · Personal Project — Nov 2020 - Oct 2022

Blockchain application development; full-stack and smart contract development.

State Nuclear Power Automation System Engineering Co., Ltd. — Jul 2019 - Oct 2020

Nuclear Power Instrumentation & Control Engineer

PRODUCT & TECHNICAL PRACTICE

Product	Find needs in everyday life and work, make product tradeoffs as AI capabilities change, explore new product forms, and carry them through interaction design and engineering.
Technology	Agent planning and tool use, context and state management, MCP / ACP, cloud and local execution; TypeScript, React, Node.js / Bun, desktop apps and browser extensions.

EDUCATION

Qingdao University of Science and Technology B.Eng. in Automation — Sep 2015 - Jun 2019
